Are You Getting Enough Sleep?

**MOBILE  
MEDICAL  
CORPORATION**

## Getting enough sleep is important for people of all ages to stay in good health.

People often cut back on their sleep for work, for family demands, or even to watch a good show on television. But if not getting enough sleep is a regular part of your routine, you may be at an increased risk for obesity, type 2 diabetes, high blood pressure, heart disease and stroke, poor mental health, and even early death. Even one night of short sleep can affect you the next day. Not only are you more likely to feel sleepy, you're more likely to be in a bad mood, be less productive at work, and be involved in a motor vehicle crash. All information via the Center for Disease Control (CDC).

### How Much Sleep Do I Need?

How much sleep you need changes as you age. The American Academy of Sleep Medicine and the Sleep Research Society recommend:

Age Group	Age	Recommended Hours of Sleep
Infant	4-12 months	12-16 hours per 24 hours (including naps)
Toddler	1-2 years	11-14 hours per 24 hours (including naps)
Pre-School	3-5 years	10-13 hours per 24 hours (including naps)
School Age	6-12 years	9-12 hours per 24 hours
Teen	13-18 years	8-10 hours per 24 hours
Adult	18-60 years	7 or more hours per night

## Habits to Improve Your Sleep

- Be consistent. Go to bed at the same time each night and get up at the same time each morning, including on the weekends.
- Make sure your bedroom is quiet, dark, relaxing, and at a comfortable temperature.
- Remove electronic devices such as TVs, computers, and phones from the bedroom.
- Avoid large meals, caffeine, and alcohol before bedtime.
- Don't use tobacco.
- Get some exercise. Being physically active during the day can help you fall asleep more easily at night.

## What About Sleep Quality?

Getting enough sleep is important, but good sleep quality is also essential. Signs of poor sleep quality include feeling sleepy or tired even after getting enough sleep, repeatedly waking up during the night, and having symptoms of a sleep disorder (such as snoring or gasping for air). Better sleep habits may improve the quality of your sleep. If you have symptoms of a sleep disorder, such as snoring or being very sleepy during the day after a full night's sleep, make sure to tell your doctor.
